

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in this application.

Listing of Claims:

1. (currently amended) A light emitting display comprising:
a first addressing electrode;
a second addressing electrode; and
a nanomorph material layer having at least one nanomorph non-polymeric organic compound which is positioned between the first addressing electrode and the second addressing electrode and which is not a linking agent.
2. (previously presented) The light emitting display according to Claim 1, wherein the nanomorph material is a first non-polymeric organic nanomorph material adapted to luminesce at a first wavelength.
3. (previously presented) The light emitting display according to Claim 2, further comprising:
a second non-polymeric organic nanomorph material positioned between the first addressing electrode and the second addressing electrode in a location other than a location of the first organic nanomorph material, the second organic nanomorph material being adapted to luminesce at a second wavelength.
4. (previously presented) The light emitting display according to Claim 3, wherein the first non-polymeric organic nanomorph material has an equivalent chemical composition when compared to the second organic nanomorph material.
5. (previously presented) The light emitting display according to Claim 3, the first non-polymeric organic nanomorph material having a first chemical composition, the second organic nanomorph material having a second

chemical composition, wherein the first chemical composition does not equal the second chemical composition.

6. (Cancelled)

7. (Cancelled)
